aw2.get

aw2.get is used for getting the values.

- **Getting the value by setting it before**

[aw2.set bg_color=”#000? /]

```
[aw2.get bg_color /]
```

- **Getting value from module.**

```
[aw2.get module.section_title /]
```

- **Getting value from loop.**

```
[aw2.get item.post_title /]
[aw2.get item.meta.designation /] <!--collect information from meta-->
```

- **Get the data on single page.**

```
[aw2.get post.post_title /]
[aw2.get post.meta.organization /] <!--Retrieve data from meta-->
```
