aw2.upload

This shortcode is used to handle file uploads for our awesome forms. *aw2.upload* shortcode also allows you to easily set an uploaded image as featured image, or as part of WooCommerce product image gallery.

Attributes:

- **main:**
  attach_to_post | upload_to_path

  ‘attach_to_post’ allows you to attach the uploaded file to given post_id, while ‘upload_to_path’ allows you to move the file to a specified directory.

- **post_id:**
  ID of the post to which you want to attach the uploaded file in WordPress. It is required for upload to work properly.

- **upload_element_id:**
  This has to be the ‘name’ attribute of the file tag as it is used to identify the $_FILE element within the form. When set_featured is false, the attachment id of the file is stored within post meta as specified “*upload_element_id*” as the key. This is required.

- **upload_file_url:**
  If you want to store actual file URL as well for the uploaded file element you can specify the meta key using *upload_file_url* attribute.

- **dir_name:**
  If you want to upload a file outside of uploads dir, you can specify the folder path using *dir_name*.

- **file_name:**
  If you are using *upload_to_path* main attribute then you have to specify the *file_name* to use for uploading the file.

- **overwrite_file/span>**
  yes | no

  By default when the file is uploaded using *aw2.upload* it gets overwritten for *upload_to_path*. If you want you can set overwrite_file to no and if the file already exists then it automatically gets renamed by appending number a number it.

- **allowed_file_types**:
  If you want to restrict the file uploads to certain file types then you can specify the comma-separated list of extensions using *allowed_file_types*.

- **set_featured**:
  True | False

  If set_featured is set to true, it will set the uploaded image to featured image for the post. If true it will not store the attachment id within the *upload_element_id* key. By default it is false.

- **woo_product_gal**:
  True | False

  If specified as true, all the uploaded images are saved to WooCommerce product image gallery. It can only be used with *attach_to_post* main attribute

Examples of using aw2.upload:

Using *attach_to_post* to upload an image to the media library.

```
[aw2.upload post_id='1' attach_to_post upload_element_id='file' set="module.image_id" /]
[aw2.get attachment_url attachment_id='{module.image_id}' /]
```

Using *woo_product_gal* attribute with aw2.upload shortcode

```
[aw2.upload post_id='{{aw2.get request.product|post|ID}}' attach_to_post upload_element_id='product_featured' set_featured=true /]
dummy
[aw2.upload post_id='{{aw2.get request.product|post|ID}}' attach_to_post upload_element_id='product_gal' woo_product_gal=true /]
```

Using *upload_to_path* attribute

```
[aw2.upload upload_to_path
            upload_element_id="{request.ele_id}"
            dir_name="uploads/{request.dir_name}"
            file_name="{request.file_name}"
            overwrite_file='yes'
            json_encode=true /]
```
