woo.get

This short code used to call Woocommerce functions.

Requirements – Install Woo-commerce plugin From https://wordpress.org/ or Click here to Download. Once you install activate this plugin.

Here are some shortcodes with their examples:

- **Call Woocommerce function**

Syntax: [woo.get wc.{woocommerce function-name} /]

Here *function-name* will be your function name eg.

```
[woo.get wc.woocommerce_account_edit_account /]
[woo.get wc.woocommerce_account_edit_address /]
```

You can get list of various function from here

- **Related To Order**

If you want to Get Order Status, use the function get_status

[woo.get order.get_status order_id='{order-id}' set="module.order_status" /]

```
[woo.get order.get_status order_id='{{aw2.get item.ID }}' set="module.order_status" /]
```

- **Create order**

In billing section there is information related to user.

line_items section contains the information related to products in cart.

fee_lines contains information related to Convenience fees.

coupon_lines contains information related to coupon available.

```
[woo.get order.create set='module.order' status="{module.status_product}" customer_id="{module.user_id}"]
{
  "apply_tax": "[aw2.get module.apply_tax /]",
  "billing": {
    "first_name": "[aw2.get request.billing_first_name /]",
    "last_name": "[aw2.get request.billing_last_name /]",
    "address_1": "[aw2.get request.billing_address_1 /]",
    "address_2": "[aw2.get request.billing_address_2 /]",
    "city": "[aw2.get request.billing_city /]",
    "state": "[aw2.get request.billing_state /]",
    "postcode": "[aw2.get request.billing_postcode /]",
    "country": "[aw2.get request.billing_country /]",
    "company": "[aw2.get request.billing_company /]",
    "email": "[aw2.get request.billing_email /]",
    "phone": "[aw2.get request.billing_phone /]"
  },
  "line_items": [
  {
            "product_id": "[aw2.get request.pid /]",
            "quantity": 1,
           "subtotal":"[aw2.get module.subtotal.math /]",
           "total":"[aw2.get module.discount.discounted_price /]",
           "meta": {
                "Booking Duration":"{{aw2.get module.dur}}",
                "Booking Start Date":"{{aw2.get module.required_on}}",
                "Booking Start Time":"{{aw2.get module.starting_from}}",
                "Booking End Date":"{{aw2.get module.required_till}}",
                "Booking End Time":"{{aw2.get module.ending_at}}",
                "_sla_timeout":"{{aw2.get module.final_sla_timestamp}}",
                "Identification Document":"{{aw2.get request.identi_doc}}"
              }
          }
 ],
 "fee_lines": [
    {
     "name":"Convenience Fees",
     "tax_class":"",
     "tax_status":0,
     "total":"[aw2.get module.fees.math /]",
     "total_tax":0
    }
  ],
  "coupon_lines": [
    {
     "code":"[aw2.get request.discount_coupon /]",
     "discount":"[aw2.get request.discount_amount]"
    }
  ]
}
[/woo.get]
```

- **Calculate discount on cart**

For calculating discount on cart we can add function called get_discount as:

Need to pass 3 parameters as:

product_id – Id of Item the cart.

total_price – Total amount of the cart.

coupon – Name of coupon.

```
[woo.get cart.get_discount product_id="{{aw2.get request.pid}}"
 total_price="{{aw2.get module.totalamounts.math}}" coupon="{{aw2.get request.discount_coupon}}"
 set="module.discount" /]
```

- **Delete the items from the cart**

```
[woo.get cart.empty_cart /]
```
